Contrary the DCT 532 product is a pressure transmitter with a digital i²C interface. Since i²C is an easy-to-use serial communication, has low energy requirements and is easy to integrate into controllers, i²C is often used in IOT applications.

The modular structure of the device allows different electrical and mechanical connections to be provided in order to ensure that the DCT 532 can be adapted to the conditions of the application.

By using high-quality materials or components, universal use is possible in practically all industrial areas, provided the gas or fluid is compatible with stainless steel.

Preferred areas of use are

Plant and machine engineering

Energy industry
