The differential pressure transmitter DPT 100 has been especially designed for fast test processes in leakage and flow measurement, where a fast response time and high sampling rate are necessary.

The compact design of the DPT 100 facilitates the usage in standardised applications. For instance, the installation in 19" racks.

About signal processing in modern systems to simplify, the user can either a classic analogue output signal, a digital signal transmission via RS485 Interface (Modbus communication protocol RTU) or an IO-Link interface based on the standard IEC 61131-9.

Preferred areas of use are

Test engineering / leak testing

Machine and plant engineering

Environmental technology

Energy production
